

# Magento 2 Banner

## Dss

### 1. Overview

The primary purpose of the Dss Banner module is to manage banner entities within the Magento admin interface. It provides an interface to create, update, and delete banners, as well as the ability to list these banners in a grid. The module also allows for bulk operations, such as deleting multiple banners at once, through a mass delete action.

### 2. Usage

Navigate to Dss ⇒ Dss Banner ⇒ Manage Banner Grid

Manage Banner Grid

Search icon, Notification icon (1), User icon (admin)

Add New Banner

Filters, Default View, Columns

2 records found, 20 per page, 1 of 1

Activate Windows

- **Enabled:** A toggle switch that determines whether the image upload functionality is active or not. When enabled, users can upload images.
- **Title:** A text field where you can enter a title for the image upload section.
- **Text:** A text field where you can add additional text or instructions related to image uploading.
- **Button Title:** A text field for entering the label of the button that initiates the image upload process.
- **Button link:** A text field where you can specify the URL that the button will link to when clicked.
- **Your Image Field:** This section is where the actual image upload takes place. It includes
  - Upload:** A button that triggers the file selection dialog for uploading an image from your computer.
  - Select from Gallery:** A button that, if enabled, allows you to choose an image from a pre-existing gallery or library.
